**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election with traverse of species 2 in the reply filed on 2 September 2004 is acknowledged. The traversal is on the ground(s) that claims 1 and 11 are generic, and that the examiner did not properly set forth the reasons for restriction as required in MPEP 808.02. This is not found persuasive because whether or not more than one of the listed claims are generic does not effect the examination of non-elected claims until a generic claim is found allowable. Further, applicant's reliance upon MPEP 808.02 is in error-the pertinent passage is MPEP 809.02, which deals with the election of species. In requiring an election of species, the examiner is required to list the species which are claimed, and indicate if any claims are generic. As this has been done, applicant's request for reconsideration has been considered, but no new restriction will be made. The examiner agrees that claim 11 is generic.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 2-4, 6-10, 12-13 and 15-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 2 September 2004.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 5, 11 and 14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Blum, 3,889,426. '426, figures 1 and 2, discloses the claimed invention, please refer to column 3, lines 10-22). Further, '426 discloses that the polishing pad cover at least two-thirds of the lens surface, and is shown in figure 1 as being almost twice larger than the lens surface. This can be interpreted as the polishing pad is comprised of a surface having a surface area which is less than 0.15 times as great as the surface area of the workpiece, the surface being any part of the pad which is less than 0.15 times as great as the surface area of the workpiece.
